

DAY 1: OSINT & PASSIVE RECONNAISSANCE REPORT

Internship Program: Sqrock IT Solutions – Cybersecurity Internship (Phase 1)

Target Domain: example.com

Date: August 24, 2026

1. Objective

The objective of this task is to understand and perform passive information gathering on a domain without establishing direct active contact or sending aggressive probe requests to the target infrastructure.

2. Passive Reconnaissance vs. Active Reconnaissance

- **Passive Reconnaissance:** Gathering intelligence using publicly available data (WHOIS records, public DNS, IP Geolocation APIs) without interacting directly with the target server. This leaves no footprint on the target’s security logs or IDS.
- **Active Reconnaissance:** Direct probing or scanning (e.g., Nmap port scanning, vulnerability scanners) that sends packets to the target, creating visible traffic in target server logs.

3. Technical Stack & Tools Used

- **python-whois:** Extracted domain registration data and creation dates.
- **socket:** Resolved the domain name (example.com) to its corresponding IPv4 address.
- **requests:** Queried the ip-api.com service to determine the geographic location and ISP of the target IP.

4. Execution Results

Field	Collected OSINT Information
Domain Registrar	RESERVED-Internet Assigned Numbers Authority
Creation Date	1995-08-14
Resolved Target IP	172.66.147.243
Location	Toronto, Canada
ISP / Hosting	Cloudflare, Inc.

5. Screenshot / Proof of Execution

The screenshot shows a PowerShell terminal window with the following content:

```
PS C:\Users\LAPPY\OneDrive\Documents\Sqrock_Cybersecurity_Internship\Day_01_OSINT> python osint_scanner.py
```

The output of the script is a report for example.com:

```
OSINT PASSIVE RECON REPORT: example.com
```

[+] Registrar	: RESERVED-Internet Assigned Numbers Authority
[+] Creation Date	: 1995-08-14 04:00:00+00:00
[+] Target IP	: 172.66.147.243
[+] Location	: Toronto, Canada
[+] ISP	: Cloudflare, Inc.
